# What is AquaClean®?

AquaClean® technology is a fabric treatment that allows you to clean stains by using water only. AquaClean® helps to remove the majority of stains i.e. wine, ink, sauce, fat, mud, chocolate & cream.

AquaClean® is an advanced fabric protector for all kinds of upholstery. It is a treatment that covers every fibre with an invisible molecular layer that prevents dirt from penetrating the fabric.

## Clean in 3 simple steps:

1. Remove excess residue.
2. Apply water over the stain, either directly or using a damp cloth. Wait for a few seconds.
3. Press down over the stain with a damp cloth and rub gently in circular movements. If the stain doesn't come off completely repeat the process as required.

## Can I use alcohol to clean stains?

AquaClean® does not recommend alcohol or any other kind of solvent for cleaning textile fabrics. Alcohol and other solvents degrade the fibers and other components. This will also negatively affect the useful life of the upholstered furniture.

Water is all you need to clean your AquaClean® fabric. However, in the toughest cases you may use a little neutral soap diluted in water.

## Is Aquaclean<sup>®</sup> Antimicrobial?

Aquaclean<sup>®</sup> is coated with Safe Front<sup>®</sup> Protective layer. Safe Front<sup>®</sup> protects against and prevents dust mites and bacteria from reproducing, thus obtaining a totally hygienic upholstery material. It is a perfectly ecological and harmless method of eliminating the presence of mites and bacteria in fabric.

Dust mites are the cause of almost 70% of allergies, such as hay fever, bronchial asthma, atopic dermatitis and urticaria (hives).

Bacteria are the cause of infections and resistance to antibiotics in hospitals. What Safe Front<sup>®</sup> has achieved is how to prevent the presence of these mites and bacteria without resorting to the use of insecticides or volatile substances.

## Is Aquaclean an Clean & Eco Friendly Product?

Fabrics with Aquaclean<sup>®</sup> Technology have been certified with the Made in Green<sup>®</sup> registered trademark. This guarantees the absence of harmful substances in fabrics and that the manufacturing process respects the environment.

Aquaclean does not contain any PFC's (Perfluorocarbons). These are a hazard to the environment as they are not biodegradable and have an extremely long life span.
